

## **Simonpietro AGNELLO - CV**

Prof. Agnello is a PhD in Physics with experience in spectroscopic studies of materials. He has mainly carried out research in amorphous systems, glasses, semiconductors, 2D and carbon related materials as well as in materials for photovoltaic applications. The main research experiences regard the electronic state characterization through stationary and time resolved absorption and emission spectroscopy, Raman and electron paramagnetic resonance spectroscopies. The stability of materials has been also investigated by thermal treatments in controlled atmosphere and exposure to ionizing radiation. He is author or coauthor of about 200 scientific papers
