

Vincenzo FABBRIZIO_CV

Vincenzo Fabrizio is a Ph.D. candidate at the Department of Chemistry, Università degli Studi di Milano. He earned his master's degree in industrial chemistry in 2023. During his master's thesis, he concentrated on developing novel superabsorbent polymers for water vapor recovery to be used as fertigation systems for sustainable agriculture. Currently, his research focuses on developing easily recoverable photocatalysts for wastewater treatment and innovative processes for electrochemical hydrogen evolution from wastewater with the aid of noble metal free electrocatalysts.
