

Stefan WUNDRACK - CV

Stefan Wundrack was born in Magdeburg, Germany, in 1985. He received his Diploma degree in Analytical Chemistry from the Max Planck Institute for Dynamics of Complex Technical Systems, Magdeburg-Stendal University of Applied Sciences, Magdeburg, Germany, in 2008. He is currently pursuing a Ph.D. degree in the research field of epitaxy of confined 2-D materials with epitaxial graphene at the Institute of Semiconductor Technology, Technical University of Braunschweig (TU Braunschweig), Braunschweig, Germany, as of 2020.

In 2010, he joined the Physikalisch-Technische Bundesanstalt (PTB) in Braunschweig, Germany, where he is part of the Surface Chemical Analysis Group. He is responsible for the metrological linkage of optical vibrational spectroscopy techniques, such as Raman spectroscopy, to the SI system. His current research interests include the fabrication of transition metal dichalcogenides via CVD fabrication for technical and metrological applications.
